Planning Phase — Project Planning (Agile)

Date	_____
Team ID	_____
Project Name	Visualization Tool for Electric Vehicle Charge and Range Analysis
Maximum Marks	5 Marks

Product Backlog, Sprint Schedule & Estimation

Use the template below to track the product backlog and sprint schedule for the EV Visualization Tool.

Sprint	Functional Req (Epic)	USN No.	User Story / Task	Story Pts	Priority
Sprint-1	Dashboard Access	USN-1	As a user, I can access the EV dashboard to explore charge/range data.	2	High
Sprint-1	Dashboard Access	USN-2	As a user, I can filter EV data by model, battery size, and date.	3	High
Sprint-1	Dashboard Access	USN-3	As a user, I can view a summary stats panel (total trips, avg range).	2	Medium
Sprint-2	Visualization	USN-4	As a user, I can view a geographic range heatmap.	5	High
Sprint-2	Visualization	USN-5	As a user, I can view charge curves (battery % vs. time).	4	High
Sprint-2	Visualization	USN-6	As a user, I can see temperature vs. range scatter plots.	3	Medium
Sprint-3	Analysis	USN-7	As a user, I can compare range across different EV models.	4	High
Sprint-3	Analysis	USN-8	As a user, I can see battery degradation trends over time.	3	Medium
Sprint-4	Export & Share	USN-9	As a user, I can download or share charts for reports.	2	Medium
Sprint-4	Export & Share	USN-10	As a user, I can share the dashboard link with filters included.	2	Low

Project Tracker & Sprint Schedule

Sprint	Total Story Points	Duration	Start Date	End Date (Planned)	Pts Completed

Sprint-1	20	6 Days	_____	_____	_____
Sprint-2	20	6 Days	_____	_____	_____
Sprint-3	20	6 Days	_____	_____	_____
Sprint-4	20	6 Days	_____	_____	_____

Velocity & Burndown Chart

Velocity:

Team velocity is estimated at 20 story points per sprint (6-day sprint). Average velocity per day = 20 / 6 ≈ 3.3 story points/day.

Burndown Chart Description:

A burndown chart tracks remaining story points against elapsed sprint days. It helps the team identify if they are on track or falling behind. For each sprint, plot: X-axis = Sprint Days (Day 1–6), Y-axis = Remaining Story Points (20 → 0). Ideal line goes linearly from 20 to 0.
